Scientific Publishing Process

Journal or Conference Selection

- Choosing a right venue is crucial
- Factors to Consider
 - Scope: Does the journal/conference match the research topic?
 - Impact Factor (journal) or Ranking (conference)
 - Location (conference)
 - Time taken to review
 - Fees
 - Indexing: Prefer journals indexed in Scopus, Web of Science, IEEE Xplore, ACM Digital Library, or Google Scholar.
 - Acceptance Rate: Prestigious conferences (e.g., NeurIPS, CVPR) have lower acceptance rates ($< 25\%$).

Evaluate quality of your contribution

■ Target conference

- Analysis of Evaluation Criteria for International Scientific Conferences
- International CORE Conference Rankings: ICORE
- International Conferences indexed by Scopus

■ Target Journal

- Journal Evaluation Criteria
- Web of Science Master journal List
- Scopus indexed journals
- Scimago Journal & Country Rank (SJR)

CORE Conference Rankings

■ CORE Rankings Portal

- DB: <https://portal.core.edu.au/conf-ranks/>
- Where people publish: <https://portal.core.edu.au/core-tools/wpp/>

■ Rankings

- A* - flagship conference, a leading venue in a discipline area
- A - excellent conference, and highly respected in a discipline area
- B - good to very good conference, and well regarded in a discipline area
- C - other ranked conference venues that meet basic standards for peer reviewed venues.
- Australasian - A conference for which the audience is primarily Australians and New Zealanders
- Unranked - A conference for which no ranking decision has been made
- National - A conference which is run primarily in a single country
- Regional - Similar to National but may cover a region crossing national borders

Conferences indexed by Scopus

- Scopus
 - Scopus is a scientific citation database managed by Elsevier covering articles, conferences, etc.
 - <https://www.elsevier.com/solutions/scopus>
- Conference proceedings are indexed by Scopus
 - Most conference proceedings published by reputable publishers such as IEEE Xplore, Springer, Elsevier, ACM Digital Library, and Taylor & Francis are indexed by Scopus.
- Unranked conferences may be indexed in Scopus

Journal Rankings

- Impact Factor
 - by Web of Scienc
- Scopus CiteScore
 - Similar to IF, but computed by Scopus
- SJR (SCImago Journal Rank) by SCImago

Q1 – top 25% journals (percentile)
Q2 – top 50% journals
Q3 – top 75% journals
Q4 – worse 25% journals

Scopus indexed journals

- Scopus Database: <https://www.scopus.com/sources.uri>

Submission

- Submit papers using online submission systems
- What to submit?
 - Paper/manuscript
 - Cover letter (journal only)
 - Supplementary materials (if any)
 - Dataset, source code (if any)

Cover letter

March 10, 2025

Prof. Patrick Siarry, Editor-in-Chief

Dear the Editor:

We would like to submit a manuscript entitled <paper title> for consideration in the <journal name> journal.

<what is the topic, why it is interesting and important> Generating test cases and test scripts is a crucial activity for software test automation, but it is time-consuming and error-prone...

<what are the solution and its keyresults> In this paper, we introduce an iterative LLM-based agent that determines the next action and generates a sequence of actions to perform a given task, which is effectively an automated test case...

<Main contributions>

We confirm that this manuscript is not under consideration by another journal. All authors agree with the manuscript's submission to <journal> journal.

We are looking forward to hearing from you soon.

Yours sincerely,

Vu Nguyen, Ph.D.

On behalf all authors

Peer Review

- Papers undergo editorial screening followed by peer review
- Types of Peer Review
 - Single-Blind: Reviewers know the authors, but authors don't know the reviewers.
 - Double-Blind: Both authors and reviewers are anonymous.
 - Open Review: Authors and reviewers are known to each other.
- Review Process
 1. Editor Screening: the editor checks for relevance, plagiarism, and adherence to guidelines.
 2. Reviewer Assignment: The manuscript is sent to 2-4 subject matter experts.
 3. Reviewer Evaluation: Reviewers provide comments, suggestions, and recommendations: Accept, Minor Revisions, Major Revisions, Reject

Paper Review

- Paper review is an activity volunteered by researchers in the research community
- Researchers contribute to review as a means of contribution
- Typical steps
 - Read the assigned paper, e.g., in 1-3 hours
 - Write review
 - Give scores for the paper
 - Submit review based on a form

Paper Review

- Typical sections
 - Summary of the paper
 - Provide strengths and weaknesses
 - Provide suggestions/ recommendations
 - Provide scores for different criteria
 - Provide the overall evaluation score

Paper Review

■ Advice

- ❑ Be modest in providing comments
- ❑ Do not be too tough on your criticisms
- ❑ Focus on the paper, not the authors
- ❑ Be sure before you criticize
- ❑ Check your writing
 - When you point out writing issues of the paper, your writing has to be correct
- ❑ Generally, provide reviews as if you were the authors to receive them

Notification

- Authors receive feedback via a notification email
- Scary to read this email
- Sad or happy time
- Possible Outcomes
 -  Accepted: rare on the first journal submission
 -  Minor Revision: small changes required before acceptance.
 -  Major Revision: substantial modifications required, but the paper is still under consideration.
 -  Rejected: paper is declined, either due to quality, scope mismatch, or reviewer concerns.

Revision

- Journals often require **many** revisions
- Conferences often do not have revisions (some confs have two cycles)
- Handling revisions
 - Revise the manuscript carefully, making necessary improvements.
 - Prepare a detailed response letter addressing each reviewer's concern:
 - Example:
Reviewer: "Clarify dataset preprocessing steps."
Response: "We have added a detailed explanation in Section 3.2, Page 7."
 - Highlight the changes in the revised document.

Response to Reviewers

File: “Response to Reviewers”

First of all, we would like to thank the reviewers for reading our manuscript and providing constructive suggestions to improve it. We also thank the reviewers and the editors for giving us a chance to revise the paper.

Below, we present our responses to the comments from the reviewers.

Reviewer #1:

“Conduct more experiments on larger-scale subsets from the Webis-WebSeg-20 dataset, which contains 8,490 web pages, to validate the scalability and robustness of the approach”

Our response: As stated in our paper, the dataset contains a bug in recording Xpath preventing us from using all web pages in the dataset. We could only choose 1,969 web pages that are bug free. This defect is also claimed by the Webis dataset provider (Github Issue:

<https://github.com/webis-de/cikm20-web-page-segmentation-revisited-evaluation-framework-and-dataset/issues/1>)

“I suggest that the authors conduct a comprehensive investigation to determine if their proposed framework can outperform state-of-the-art tools and models.”

Our response: In the revised manuscript, we compared our approach with another state-of-the-art Transformer vision model Segment Anything [<https://arxiv.org/abs/2304.02643>]. This model is reported to have the ability to generalize and segment objects, even if they have not been explicitly trained on them.

Proofing

- Once accepted, the manuscript undergoes **final proofreading and formatting**
- What happens during proofing?
 - Authors receive **proofs**
 - Check for:
 - Typos
 - Formatting issues
 - Figure/table placement errors
 - Submit corrections within 24-72 hours (usually)

Publication

- Conference papers are in softcopy or in print (rare)
- Journal papers are both online and in print
- When papers are published
 - They receive a DOI (Digital Object Identifier).
 - Indexed in IEEE Xplore, Springer, ACM Digital Library, Google Scholar, etc..
 - Available for citation and reference
- Conference papers are published only if you present them
