

Consider this data:

```
]select *  
  from GradeReport  
 where section_id like '1' and grade_100 < 50
```

	section_id	student_id	grade_100	grade_ABC
1	1	ST003	40	F
2	1	ST004	42	F
3	1	ST005	43	A

When we delay the procedure RetrieveFailedStudents 5 seconds and execute simultaneously two procedures, we will encounter the error. Since the UpdateGrades works first, then the data will be modified.

	student_id	student_name	course_name	grade_100
1	ST003	Huynh Thanh Phong	Databases	40
2	ST004	Hoang Nhat Linh	Databases	42
3	ST005	Le Ba Khanh	Databases	43

Propose method to fix:

```
go  
begin transaction  
set transaction isolation level repeatable read  
exec RetrieveFailedStudents @course_name = 'Databases', @semester = 'Fall', @year = 2022  
commit
```

This transaction will isolate the procedure RetrieveFailedStudents until this procedure finish.

The result:

	student_id	student_name	course_name	grade_100
1	ST003	Huynh Thanh Phong	Databases	40
2	ST004	Hoang Nhat Linh	Databases	42
3	ST005	Le Ba Khanh	Databases	43
