

LAB - In class

Week 6: Relational Division and Stored Procedure & Function

Lecturer:	Lê Thị Nhàn, PhD.
TA:	Phan Thị Phương Uyên, MSc.
Lab instructor:	Nguyễn Ngọc Toàn, MSc. Nguyễn Ngọc Minh Châu, MSc.

In-class assignment

(Using the University database)

Write SQL code to perform the following tasks.

1. Write a function that counts the number of instructors assigned to a given section_id.
2. Write a function that counts the number of students registered for a given section_id.
3. Write a stored procedure to retrieve the section ID, course name, semester, school year, number of instructors assigned to the section, and number of students registered for the section.
 - Input: section_id
 - Output: section_id, course_name, semester, school_year, number of registered students, number of lecturers assigned to the section.
 - Note: Reuse the functions defined in the questions 1 and 2.
4. Write a stored procedure to retrieve the codes and names of students who have enrolled in all courses managed by a given department name.
 - Input: department_name
 - Output: student_id, student_name
5. Write a stored procedure to retrieve instructor_id, year, semester, number of classes taught by each lecturer.
 - Input: year, semester
 - Output: instructor_id, year, semester, number of classes taught by each lecturer
6. Write a function that calculates the total number of registered credits of a student in 1 semester of an academic year
 - Input: student_id, year, semester
 - Output: number of register credits
